

Documentation of the conversion of fracture texts using Abbyyy:

Krüger, Johann Christian: Works. Critical Complete Edition, edited by David G. John, Tübingen 1986.

Training was 2-3 pages (on the "Cyrus" text) within 30 minutes

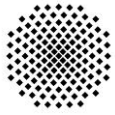

(*si, st, tz* → were trained; from "The candidates..." were also *ss, th, tt*, trained)

It is best to start with a **longer text** (50+ pages) to see which characters should be trained additionally.

In the first table all results were summarized as an overview. The number of errors, time required, etc. can be read in detail in the further course of the documentation.
